Sheet Size:	595mm LWD x 595mm SWD. (Max LWD size is 675mm)		
Material:	Mild Steel – Cold Reduced DC01 to BS EN 10130. Aluminium – Grade 1050 H14.		

All expanded metal products are manufactured from a single piece of raw material and are created as a continuous mesh with no joints or loose strands. The finished product has a greater strength to weight ratio than the un-expanded parent material. Available in sheets or coil form (certain products only). Expanded metal by its very nature is a green product with almost no wastage arising from the manufacturing process. Additional specification variations are available, please contact us for more information.
